Aims of Module

To enable students to have knowledge of the anatomy and understand the physiology of the nervous, endocrine, muscular, integumentary and skeletal systems.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Demonstrate understanding of the structure of the nervous, muscular, endocrine, skeletal and integumentary systems.
- 2 Demonstrate understanding of the physiology of the nervous, muscular, endocrine, skeletal and integumentary systems.
- 3 Relate the roles of the nervous, endocrine, muscle, skeletal and integumentary systems in the regulation and maintenance of homeostasis.

Indicative Module Content

Organisation: the principal body systems, anatomical, regional and directional terms, tissue types. Nervous system: anatomy and physiology of the central and peripheral nervous system. Endocrine System: anatomy, and physiology of the endocrine glands, hormonal mechanisms of action, physiological roles of pituitary, pineal, thyroid, parathyroid, adrenal, pancreas and sex hormones. Muscular System: anatomy of muscle, molecular, histological and anatomical events in muscle contraction. Integumentary System: anatomy and physiology of the skin and accessory organs. Skeletal System: anatomy of bone, joints and ligaments; ossification, bone physiology.
