MODULE DESCRIPTOR

Module Title

Machine Learning for Cyber Security

Reference	CMM541	Version	1
Created	April 2019	SCQF Level	SCQF 11
Approved	May 2019	SCQF Points	15
Amended		ECTS Points	7.5

Aims of Module

To provide students with the ability to evaluate and apply the methods, tools and techniques used in machine learning for cyber security.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

1	Demonstrate a critical understanding of data science process lifecycle.
2	Critically evaluate the different machine learning algorithms used in cyber security.
3	Critically analyse and appraise the security of machine learning products.
4	Design and implement machine learning solutions for defensive and offensive security.

Indicative Module Content

The case for Machine Learning (ML) in security. Data sets and Data types in security (e.g. structured vs unstructured, labelled vs unlabelled, overfitting vs underfitting, class imbalance, biased). ML product development lifecycle (e.g. TDSP or CRISP-DM). ML types (e.g. supervised, unsupervised, reinforcement). ML tasks (e.g. classification, clustering, regression, dimension reduction, density estimation, deep learning). Popular ML algorithms (e.g. LDA, CART, SVM, Naive bayesian, KNN, K-means, Random forests, Genetic algorithms, ANNs, Autoencoder). ML security applications: cracking CAPTCHA, detecting malicious URLs, detecting malware/ransomware, detecting phishing/spam emails, detecting network traffic anomalies and DOS attacks, detecting credit card fraud, Programming in Python and using relevant tools and libraries. Challenges/limitations of ML in security. Guidelines for applying ML to security. Introduction to adversarial ML. Security of ML products.

Module Delivery

Key concepts are introduced and illustrated through lectures. The necessary practical skills are developed through a series of laboratory exercises.

Module Ref:	CMM541 v1

Indicative Student Workload	Full Time	Part Time
Contact Hours	44	44
Non-Contact Hours	106	106
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	150
Actual Placement hours for professional, statutory or regulatory body		

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1

Type:	Coursework	Weighting:	50%	Outcomes Assessed:	4
Description:	This will be a group project in which students will design and implement a machine learning solution to a security problem.				

Component 2

Type:	Practical Exam	Weighting:	50%	Outcomes Assessed:	1, 2, 3
Description:	This is a practical exam where students will be appraising the various machine learning techniques.				

MODULE PERFORMANCE DESCRIPTOR

Explanatory Text

The calculation of the overall grade for this module is based on 50% weighting of C1 and 50% weighting of C2 components.

		Coursework:						
		A	**B**	**C**	**D**	**E**	**F**	**NS**
Practical Exam:	**A**	A	A	B	B	C	E	
	B	A	B	B	C	C	E	
	C	B	B	C	C	D	E	
	D	B	C	C	D	D	E	
	E	C	C	D	D	E	F	
	F	E	E	E	E	E	F	
	NS	Non-submission of work by published deadline or non-attendance for examination						

Module Requirements

Prerequisites for Module	None.
Corequisites for module	None.
Precluded Modules	None.

Module Ref:	CMM541 v1
