MODULE DESCRIPTOR

Module Title

Introduction to Electrical Engineering

Reference	EN1560	Version	6
Created	August 2021	SCQF Level	SCQF 7
Approved	March 2004	SCQF Points	15
Amended	August 2021	ECTS Points	7.5

Aims of Module

To provide the student with the ability to understand electrostatic and electromagnetic concepts and the principles of electric circuit analysis.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Use mathematical modelling software to select suitable solutions for simple electromagnetic or electrostatic design problems.
- 2 Analyse simple electromagnetic and electrostatic systems.
- 3 Use mathematical modelling software to solve basic circuit problems in the areas of; AC and DC circuits or circuit analysis using Kirchhoff's Laws.
- 4 State the basic theory and solve problems in simple electrical engineering systems.

Indicative Module Content

Basic concepts of electrostatics, electric charge, electric flux, electric field strength, potential and potential difference; Definition of capacitance, parallel plate capacitor. Basic concepts of electromagnetism, magnetic field, magnetic field density, magnetic field strength, Ampere's law, principles of magnetic circuits and inductance of a simple magnetic circuit. Faraday's law of electromagnetic induction. Electric circuits, circuit concepts, voltage and current sources, resistance, current flow and potential distribution. Ohm's and Kirchhoff's laws, Thevenin and Norton Theorem's, superposition, simple circuit analysis using Kirchhoff's laws. Reasons for use of alternating current for light and heavy current applications, choice of sinusoidal waveform. Amplitude, frequency and phase concepts. Inductive capacitive impedance concepts, simple time domain analysis of ac circuits, phasor representation of ac quantities, rms representation of voltage and current.

Module Delivery

This is a lecture based course supplemented with tutorial sessions, laboratory sessions and directed study.

Indicative Student Workload

	Full Time	Part Time
Contact Hours	50	50
Non-Contact Hours	100	100
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	150
<i>Actual Placement hours for professional, statutory or regulatory body</i>		

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1

Type:	Coursework	Weighting:	30%	Outcomes Assessed:	1, 3
Description:	Laboratory assignment.				

Component 2

Type:	Examination	Weighting:	70%	Outcomes Assessed:	2, 4
Description:	Closed book examination.				

MODULE PERFORMANCE DESCRIPTOR**Explanatory Text**

The module has 2 components and to gain an overall pass a minimum D grade must be achieved in each component. The component weighting is as follows: C1 is worth 70% and C2 is worth 30%.

		Coursework:						
		A	B	C	D	E	F	NS
Examination:	A	A	A	B	B	E	E	
	B	B	B	B	C	E	E	
	C	B	C	C	C	E	E	
	D	C	C	D	D	E	E	
	E	E	E	E	E	E	F	
	F	F	F	F	F	F	F	
	NS	Non-submission of work by published deadline or non-attendance for examination						

Module Requirements

Prerequisites for Module	None.
Corequisites for module	None.
Precluded Modules	None.

ADDITIONAL NOTES

An Indicative Bibliography will normally reference the latest edition of a text. In some cases, older editions are equally useful for students and therefore, those are the editions that may be stocked.
