

MODULE DESCRIPTOR

Module Title

Dynamics			
Reference	EN2500	Version	7
Created	March 2023	SCQF Level	SCQF 8
Approved	March 2004	SCQF Points	15
Amended	August 2023	ECTS Points	7.5

Aims of Module

To provide the student with the ability to understand, apply and discuss the modelling concepts and theories associated with free and forced vibration of 1-DOF systems and the concepts and theories associated with the dynamics of planar mechanisms, rotating machines, rigid-body and impulsive systems.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Solve problems involving free and forced vibration of 1-DOF systems including vibration isolation and transmissibility.
- 2 Apply the concept of dynamic equivalence in the experimental results of single degree freedom vibrating systems.
- 3 Calculate out-of-balance forces associated with rotating machines.
- 4 Compute the kinematics of planar mechanisms.

Indicative Module Content

Kinematics of planar mechanisms with revolute (pin) and prismatic (sliding joint); forces and torques arising in planar mechanisms owing to inertia forces and moments associated with acceleration of links. Free vibration of undamped 1-DOF systems. Dynamic equivalence of engineering systems. Free and forced vibration of damped 1-DOF systems. Transient response to simple inputs. Steady-state sinusoidal response. Vibration isolation and forces transmitted to supports. Impulse force, impact and momentum. Kinetic and potential energy. Balancing of rigid rotors. Single-plane and two-plane balancing.

Module Delivery

This module is lecture based with tutorials, directed self-study, laboratory work and private study.

Indicative Student Workload

	Full Time	Part Time
Contact Hours	50	50
Non-Contact Hours	100	100
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	150
<i>Actual Placement hours for professional, statutory or regulatory body</i>		

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1

Type:	Examination	Weighting:	100%	Outcomes Assessed:	1, 2, 3, 4
Description:	A closed book examination				

MODULE PERFORMANCE DESCRIPTOR**Explanatory Text**

The assessment of this module comprises 100% on an examination. To pass this module a minimum of Grade D is required

Module Grade	Minimum Requirements to achieve Module Grade:
A	A
B	B
C	C
D	D
E	E
F	F
NS	Non-submission of work by published deadline or non-attendance for examination

Module Requirements

Prerequisites for Module	Statics & Dynamics (EN1700) or its equivalent.
Corequisites for module	None.
Precluded Modules	None.
