

## MODULE DESCRIPTOR

### Module Title

Electrical Systems

Reference	EN2562	Version	5
Created	May 2017	SCQF Level	SCQF 8
Approved	March 2004	SCQF Points	15
Amended	May 2017	ECTS Points	7.5

### Aims of Module

To provide the student with the necessary skills to analyse practical ac electric circuits and simple electromagnetic problems.

### Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Quantify the capacitance of conductor systems.
- 2 Quantify the self-inductance of simple conductor arrangements, explain magnetic circuit principles and their analysis methods.
- 3 Apply electric circuit theorems to analysis of ac circuits.
- 4 Apply MATLAB to the analysis and simulation of electrical systems.

### Indicative Module Content

Calculation of capacitance and inductance for practical conductor systems. Force between current carrying conductors, analysis of series and parallel magnetic circuits, relationships between magnetic and electric circuits, concept of leakage flux and leakage inductance. Electric circuit theorems, including mesh and nodal analysis methods, applied to DC & AC circuits. Solution of transient problems in RL and RC circuits. Series and parallel resonance, Q factor, bandwidth and gain-bandwidth product. Introduction to MATLAB/SIMULINK.

### Module Delivery

This is a lecture based course supplemented with tutorial sessions, laboratory exercises and directed study.

**Indicative Student Workload**

	Full Time	Part Time
Contact Hours	45	45
Non-Contact Hours	105	105
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	150
<i>Actual Placement hours for professional, statutory or regulatory body</i>		

**ASSESSMENT PLAN**

If a major/minor model is used and box is ticked, % weightings below are indicative only.

**Component 1**

Type: Coursework Weighting: 30% Outcomes Assessed: 4  
 Description: MATLAB based coursework.

**Component 2**

Type: Examination Weighting: 70% Outcomes Assessed: 1, 2, 3  
 Description: Closed book examination.

**MODULE PERFORMANCE DESCRIPTOR****Explanatory Text**

To pass the module, you must achieve a 40% weighted average mark from the exam and coursework. In addition you need to achieve at least 35% in both the individual exam and coursework components.

Module Grade	Minimum Requirements to achieve Module Grade:
<b>A</b>	=>70%
<b>B</b>	60-69%
<b>C</b>	50-59%
<b>D</b>	40-49%
<b>E</b>	35-39%
<b>F</b>	0-34%
<b>NS</b>	Non-submission of work by published deadline or non-attendance for examination

**Module Requirements**

Prerequisites for Module	Introduction to Electrical Engineering(EN1560) or equivalent.
Corequisites for module	None.
Precluded Modules	None.

**ADDITIONAL NOTES**

An Indicative Bibliography will normally reference the latest edition of a text. In some cases, older editions are equally useful for students and therefore, those are the editions that may be stocked.
