Aims of Module	Self Study			
	Private Study			
To enable the student to extend their understanding of the basic	Private study	37	37	
concepts and theories of	Mode of Delivery			

#### **Mode of Delivery**

The module is delivered by means of lectures, tutorials and guided self-study and is integrated with applications in the laboratory.

# **Learning Outcomes for**

structural analysis.

Mechanics of Solids and apply them in the areas of stress and On completion of this module, students are expected to be able to:

- 1.Identify and analyse beam bending behaviour and the linear stress-strain and deflection relationships associated with statically determinate and indeterminate loading.
- 2.Analyse complex stresses and strains in two-dimensions and explain the relationships between elastic constants.
- 3.Identify and explain torsional loading and the linear stress-strain relationship for statically determinate and indeterminate loading.
- 4.Evaluate shear stresses due to bending.
- 5.Apply strain energy methods to the load analysis of simple structures.

# **Indicative Module Content**

Beam bending theory and the bending equation; properties of plane areas; beam deflection for statically determinate and indeterminate loading; stress-strain realtionships in two-dimensions and Mohr's circle techniques; strain gauge rosettes; relationships between elastic constants; torsion of circular section shafts; shear

### Assessment Plan

	Learning Outcomes Assessed
Component 1	1,2,3
Component 2	1,2,3,4,5

Component 2 is a closed book examination (50% weighting).

Component 1 consists of two items of coursework - a laboratory and an analytical investigation (25% weighting each).

# **Indicative Bibliography**

- 1.HEARN, E.J., 1997. Mechanics of Materials Vol 1. 3rd ed. Oxford: Butterworth-Heinemann.
- 2.BENHAM, P.P., CRAWFORD, R.J. and ARMSTRONG, C.G., 1996. Mechanics of Engineering Materials. 2nd ed. London: Longman.
- 3.HIBBELER, R.C., 2017. Mechanics of Materials. 10th ed. Upper Saddle River, NJ: Prentice-Hall.

stresses in beams due to bending; introduction to strain energy methods in structural analysis.
