MODULE DESCRIPTOR

Module Title

Mechanics Of Solids

Reference	EN2701	Version	4
Created	March 2017	SCQF Level	SCQF 8
Approved	March 2004	SCQF Points	15
Amended	June 2017	ECTS Points	7.5

Aims of Module

To enable the student to extend their understanding of the basic concepts and theories of Mechanics of Solids and apply them in the areas of stress and structural analysis.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Identify and analyse beam bending behaviour and the linear stress-strain and deflection relationships associated with statically determinate and indeterminate loading.
- 2 Analyse complex stresses and strains in two-dimensions and explain the relationships between elastic constants.
- 3 Explain and analyse torsional loading in shafts and shear stresses in beam bending.
- 4 Evaluate strain energy methods to the load analysis of simple structures.
- 5 Apply strain energy methods to experimental data involving power transmission systems.
- 6 Investigate experimentally the deflection of beams subjected to loadings.

Indicative Module Content

Beam bending theory and the bending equation; properties of plane areas; beam deflection for statically determinate and indeterminate loading; stress-strain relationships in two-dimensions and Mohr's circle techniques; strain gauge rosettes; relationships between elastic constants; torsion of circular section shafts; shear stresses in beams due to bending; introduction to strain energy methods in structural analysis.

Module Delivery

The module is delivered by means of lectures, tutorials and guided self-study and is integrated with applications in the laboratory.

Indicative Student Workload	Full Time	Part Time
Contact Hours	50	50
Non-Contact Hours	100	100
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	150
Actual Placement hours for professional, statutory or regulatory body		

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1

Type:	Coursework	Weighting:	50%	Outcomes Assessed:	5, 6
Description:	Two items of coursework - a laboratory and an analytical investigation (25% weighting each).				

Component 2

Type:	Examination	Weighting:	50%	Outcomes Assessed:	1, 2, 3, 4
Description:	A closed book examination (50% weighting).				

MODULE PERFORMANCE DESCRIPTOR

Explanatory Text

To pass the module students must achieve at least a grade D AND a minimum of 35% in the exam and coursework components.

Module Grade	Minimum Requirements to achieve Module Grade:
A	=>70%
B	60-69%
C	50-59%
D	40-49%
E	35-39%
F	0-34%
NS	Non-submission of work by published deadline or non-attendance for examination

Module Requirements

Prerequisites for Module	Statics and Dynamics (EN1700) or equivalent.
Corequisites for module	None.
Precluded Modules	None.
