## MODULE DESCRIPTOR

### Module Title

Electrical Power And Energy Systems

Reference	EN3561	Version	6
Created	May 2017	SCQF Level	SCQF 9
Approved	March 2004	SCQF Points	15
Amended	May 2017	ECTS Points	7.5

### Aims of Module

To provide the student with the ability to assess the operation and control of electrical power and energy systems.

### Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Explain how electrical energy is produced, supplied and traded.
- 2 Analyse the operation of synchronous generators and power systems under normal steady state and short circuit operating conditions.
- 3 Explain the principles of control of power, reactive power, voltage and frequency for synchronous generators and power supply systems.
- 4 Demonstrate understanding of power systems under different operating conditions in a case study.

### Indicative Module Content

Electrical energy production, conventional and modern approaches, energy sources used for electrical generation. Power system operation, matching of supply and demand, energy trading. Basic components of electrical power systems, generation, power transformers, lines and cables, circuit breakers, loads. Representation using single-line diagrams and the per-unit system, steady-state and short circuit analysis. Synchronous generator operation, equivalent circuit, phasor diagrams; operation on infinite busbars. Control of real power and frequency, control of reactive power and voltage. Introduction to embedded (distributed) generation. Introduction to High Voltage DC transmission and DC grids.

### Module Delivery

This is a lecture-based course supplemented with tutorial sessions and student-centred learning.

<b>Indicative Student Workload</b>	Full Time	Part Time
Contact Hours	42	42
Non-Contact Hours	108	108
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	150
<i>Actual Placement hours for professional, statutory or regulatory body</i>		

## ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

### Component 1

Type:	Coursework	Weighting:	30%	Outcomes Assessed:	4
Description:	Class based Quizzes				

### Component 2

Type:	Examination	Weighting:	70%	Outcomes Assessed:	1, 2, 3
Description:	Closed book examination				

## MODULE PERFORMANCE DESCRIPTOR

### Explanatory Text

To pass the module, you must achieve a 40% weighted average mark from the exam and coursework. In addition you need to achieve at least 35% in both individual exam and coursework components.

Module Grade	Minimum Requirements to achieve Module Grade:
<b>A</b>	=>70%
<b>B</b>	60-69%
<b>C</b>	50-59%
<b>D</b>	40-49%
<b>E</b>	35-39%
<b>F</b>	0-34%
<b>NS</b>	Non-submission of work by published deadline or non-attendance for examination

## Module Requirements

Prerequisites for Module	Electrical Power (EN2560) or equivalent is a prerequisite.
Corequisites for module	None.
Precluded Modules	None.
