

MODULE DESCRIPTOR

Module Title

Energy Conversion and Storage

Reference	EN3570	Version	5
Created	August 2021	SCQF Level	SCQF 9
Approved	March 2004	SCQF Points	15
Amended	August 2021	ECTS Points	7.5

Aims of Module

To provide the student with the ability to apply fundamental technical concepts and principles in the appraisal and selection of energy conversion and storage devices.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Analyse the performance of IC engines and combustion in IC engines.
- 2 Identify and analyse typical alternative energy storage devices.
- 3 Analyse the performance of wind and hydro power generation systems.
- 4 Analyse experimental results taken from the IC engine test bed.
- 5 Compare the performance of different energy storage technologies.

Indicative Module Content

Heat pumps, geo-thermal/ground source. Rankine cycle, Refrigeration & air conditioning, Combustion, Aspects of Steam Plant Design, Nuclear, IC Engines. Turbo-Machinery: Well's Turbine, Hydraulic Turbines, Pelton, Francis, Kaplan. Dimensional analysis, performance laws, performance characteristics, specific speed, energy losses, hydraulic efficiency. Energy storage requirements, principles, technologies and applications. Thermal energy storage, wet and dry systems; mechanical energy storage, flywheels, compressed air energy storage, pumped hydro schemes; electrical energy storage, battery systems, psb, vrb, ZnBr, NaS, Li-ion, lead-acid, metal-air, super capacitors, SMES; hydrogen energy systems, fuel cells, Regenesys system.

Module Delivery

This is a lecture based course supported by tutorial sessions, laboratory work and student centred learning.

Indicative Student Workload

	Full Time	Part Time
Contact Hours	N/A	44
Non-Contact Hours	N/A	106
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	N/A	150
<i>Actual Placement hours for professional, statutory or regulatory body</i>		

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1

Type:	Coursework	Weighting:	50%	Outcomes Assessed:	4, 5
Description:	Coursework and a written report.				

Component 2

Type:	Examination	Weighting:	50%	Outcomes Assessed:	1, 2, 3
Description:	Closed book examination.				

MODULE PERFORMANCE DESCRIPTOR

Explanatory Text

The module has 2 components and to gain an overall pass a minimum D grade must be achieved in each component. The component weighting is as follows: C1 is worth 50% and C2 is worth 50%.

		Examination:						
		A	B	C	D	E	F	NS
Coursework:	A	A	A	B	B	E	E	
	B	A	B	B	C	E	E	
	C	B	B	C	C	E	E	
	D	B	C	C	D	E	E	
	E	E	E	E	E	E	F	
	F	E	E	E	F	F	F	
	NS	Non-submission of work by published deadline or non-attendance for examination						

Module Requirements

Prerequisites for Module	Statics and Dynamics (EN1700) or its equivalent.
Corequisites for module	None.
Precluded Modules	None.
