MODULE DESCRIPTOR

Module Title

Advanced Digital System Design

Reference	EN4542	Version	2
Created	June 2017	SCQF Level	SCQF 10
Approved		SCQF Points	15
Amended	September 2017	ECTS Points	7.5

Aims of Module

To enable student to study the advanced techniques and methods for digital systems and to provide students with the ability to analyse, design an implement advanced digital systems.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Design, implement and evaluate the performance of digital systems.
- 2 Analyse and critically assess the design of advanced digital systems.
- 3 Synthesise solutions to engineering problems using computational intelligence based digital systems.
- 4 Analyse and evaluate solutions of computational intelligence based digital systems using computer simulation.

Indicative Module Content

Advanced techniques for processor design: pipelined processors, very long instruction word (VLIW) processors, superscalar processors, vector processors, parallel processors and supercomputers. Digital signal processing design: fixed and floating point processing, digital signal processors (architecture, instruction set, features and applications) and operation design. Computational Intelligence based digital system: artificial neural networks (biological basis, perceptron, back-propagation, feedback), fuzzy logic (fuzzification, inference engine, defuzzification), evolutionary artificial neural networks and other current methods.

Module Delivery

This module is taught using a structure programme of lectures, tutorials, laboratory exercises and student-centred learning.

Indicative Student Workload	Full Time	Part Time
Contact Hours	51	51
Non-Contact Hours	99	99
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	150
<i>Actual Placement hours for professional, statutory or regulatory body</i>		

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1

Type: Coursework Weighting: 50% Outcomes Assessed: 1, 4

Description: A coursework which consists of two items: to design and implement a digital system, and to develop software related to computational intelligence based digital systems.

Component 2

Type: Examination Weighting: 50% Outcomes Assessed: 2, 3

Description: A closed book examination.

MODULE PERFORMANCE DESCRIPTOR

Explanatory Text

To pass the module you must achieve at least 40% weighted average mark in the exam and coursework. In addition you need to achieve at least 35% in both the individual exam and coursework Components.

Module Grade	Minimum Requirements to achieve Module Grade:
A	=>70%
B	60-69%
C	50-59%
D	40-49%
E	35-39%
F	0-34%
NS	Non-submission of work by published deadline or non-attendance for examination

Module Requirements

Prerequisites for Module	Microprocessors and Microcontrollers (EN2540) or equivalent. Control and Signal Processing (EN4530) or equivalent.
Corequisites for module	None.
Precluded Modules	None.
