

MODULE DESCRIPTOR

Module Title

Subsurface			
Reference	ENM200	Version	12
Created	August 2021	SCQF Level	SCQF 11
Approved	April 2006	SCQF Points	15
Amended	August 2021	ECTS Points	7.5

Aims of Module

The module integrates knowledge of petroleum geology and the properties of petroleum fluids to develop an understanding of reservoir engineering and formation evaluation and demonstrate how the value of a hydrocarbon accumulation is created.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Identify and apply geological concepts that will allow students to critically understand how hydrocarbon accumulations occur, how different reservoirs are formed, what considerations must be taken into account in the development and production from specific types of reservoirs encountered.
- 2 Critically apply the essential tools available for finding and characterising hydrocarbon accumulations and evaluate reservoir's economics' potential valuation parameters and conditions.
- 3 Critically relate field observations to geological structure and petroleum production potential and have acquired the fundamental vocabulary and understanding that will allow students to successfully communicate these concepts with industry participants.
- 4 Master the essentials of reservoir and fluid properties from surface and down-hole measurements and analysis and estimation of initial and remaining reserves.
- 5 Appraise and justify the importance of Formation Evaluation as part of accessing and producing hydrocarbons; apply the principles of formation evaluation to oilfield development.

Indicative Module Content

Principles of geology and their application to the origin, entrapment, exploration and extraction of hydrocarbons. Concepts of reservoir engineering; properties of reservoir rock, fluid distribution and properties, porosity systems and permeability and production chemistry. Dynamics of fluid flow in reservoirs, static pressure and well-test analysis and PVT analysis. Determination of hydrocarbon volumes, estimation/classification of reserves and essentials of recovery methods. Concepts of formation evaluation and geophysical prospecting methods.

Module Delivery

The module will be delivered by means of lectures, tutorials, and guided self-study.

Indicative Student Workload

	Full Time	Part Time
Contact Hours	57	38
Non-Contact Hours	93	112
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	150
<i>Actual Placement hours for professional, statutory or regulatory body</i>		

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1

Type: Examination Weighting: 30% Outcomes Assessed: 1, 4
 Description: Coursework.

Component 2

Type: Examination Weighting: 70% Outcomes Assessed: 2, 3, 5
 Description: Closed book examination.

MODULE PERFORMANCE DESCRIPTOR**Explanatory Text**

The module has 2 components and an overall grade D is required to pass the module. The component weighting is as follows: C1 is worth 30% and C2 is worth 70%.

		Coursework:						
		A	B	C	D	E	F	NS
Examination:	A	A	A	B	B	B	E	
	B	B	B	B	C	C	E	
	C	B	C	C	C	D	E	
	D	C	C	D	D	D	E	
	E	D	D	D	E	E	E	
	F	E	E	E	E	F	F	
	NS	Non-submission of work by published deadline or non-attendance for examination						

Module Requirements

Prerequisites for Module Normally a UK 2.2 honours degree or above, in Engineering or a related discipline. Proficiency in English language for academic purposes, or IELTS score of 6.5 or above.

Corequisites for module None.

Precluded Modules This module is not suitable for students following an MSc in Professional Studies programme unless they meet the entry qualifications stipulated in the University Regulations on admission and the prerequisites above.
