MODULE DESCRIPTOR

Module Title

Production System Modelling

r roudolion bystein modelling			
Reference	ENM204	Version	6
Created	March 2017	SCQF Level	SCQF 11
Approved	April 2006	SCQF Points	15
Amended	June 2017	ECTS Points	7.5

Aims of Module

This module aims to develop skills in integrated asset management with the aid of production optimisation and modelling software.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Explain the principal and limitations of the material balance method and the influence of drive mechanisms on the recovery factor.
- 2 Build a material balance model for a new field development.
- ³ Understand the concepts of reservoir fluid composition, properties and modelling. Identify the limitations of using correlations and Equations of State.
- ⁴ Evaluate the range of possible inflow and outflow performance relationships for wells. Understand how nodal analysis is used to predict well performance.
- 5 Appraise the selection and operation of key artificial lift techniques.
- 6 Demonstrate proficiency in the use of production optimisation and modelling software for wells and reservoirs.

Prepare a conceptual development proposal for a new field. Provide a strategy to optimise the recovery 7 factor with due consideration to the timing/number of producing and injecting wells as well as utilisation of

gas lift or electric submersible pumps.

Indicative Module Content

1) Material Balance Reservoir Modelling 2) Single Well Nodal Analysis 3) Artificial Lift System Selection & Design 4) Network Production System Optimisation 5) Integrated Asset Modelling

Module Delivery

This module may be delivered by means of lectures, tutorials and student-centred learning activities supplemented by industrial visits/industry speakers.

Module Ref:		ENM204 v6	
Indicative Student Workload		Full Time	Part Time
Contact Hours		60	10
Non-Contact Hours		90	140
Placement/Work-Based Learning Experience [Notional] Hours		N/A	N/A
TOTAL		150	150
Actual Placement hours for professional, statutory or regulatory body			

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1

Туре:	Coursework	Weighting:	50%	Outcomes Assessed:	2, 6, 7
Description:	Component 1 is a cour and may also require t	sework which will in he use of appropriat	volve the e technic	preparation of a short report pres al applications software.	senting results
Component 2					
Туре:	Examination	Weighting:	50%	Outcomes Assessed:	1, 3, 4, 5
Description:	Component 2 is a close	ed book examinatior	٦.		

MODULE PERFORMANCE DESCRIPTOR

Explanatory Text

In order to pass, students should achieve a mark of at least 40% in each component (which has a weighting of 30% or more) and an overall grade D or greater.

Module Grade	Minimum Requirements to achieve Module Grade:
Α	Greater than or equal to 70%
В	In the range 60% to 69%
C	In the range 55% to 59%
D	In the range 50% to 54%
E	In the range 40% to 49%
F	Less than 40%
NS	Non-submission of work by published deadline or non-attendance for examination

Module Requirements		
Prerequisites for Module	Normally a UK honours degree, or equivalent, in Engineering or related discipline at class 2.2 or above and proficiency in English language for academic purposes (IELTS minimum score of 6.5 or equivalent). ENM200:Subsurface, ENM201:Wells and ENM202:Facilities	
Corequisites for module	ENM205 Production Operations & Flow Assurance.	
Precluded Modules	This module is not suitable for students following an MSc in Professional Studies programme unless they meet the entry qualifications stipulated in the University Regulations on admission and the prerequisites above.
