

MODULE DESCRIPTOR

Module Title

Biomaterials			
Reference	ENM403	Version	2
Created	August 2021	SCQF Level	SCQF 11
Approved	March 2018	SCQF Points	15
Amended	August 2021	ECTS Points	7.5

Aims of Module

To develop a critical understanding of the properties and structure of the natural/synthetic materials and be able to apply them using advanced processing technologies to prepare various structures for biomedical applications.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- ¹ Demonstrate a critical understanding of the main classes of natural and synthetic polymers, their structure and their applications in biomedical technology.
- Demonstrate the critical awareness of the biological interaction of the materials and various coating
 processes such as plasma spraying, jetting, RF sputter deposition, chemical vapour deposition, polymer coatings to solve orthopeadic, dental, ophthalmologic, respiratory and cardiological problems.
- ³ Deal with complex problems related to designing, selecting and processing material for biomedical engineering related products such as implants, prostheses and devices.
- 4 Apply critical analysis, evaluation and synthesis of the nanotechnology tools to forefront issues related to scaffold, reconstructive medicine and diagnostice device as well as nanotoxicity.

Indicative Module Content

1. Overview of properties of biological materials and its application in creating structure useful for biomedical applications; 2. Natural and synthetic polymer structure, properties, their classification and biomedical uses. 3. Advanced electro-mechanical design of the rehabilitation, artificial organ equipment and other diagnostic devices. 4. Coating/patterning of the prostheses using CVD, plasma spraying and jetting. 4. Biomaterials design, coatings, scaffold preparation and characterisation. Nanoparticle/nanocomposite role in biomedical applications, Nanoparticle/nanocomposite preparation, nanotoxicity, cell uptake of nanoparticles for the dental, ophthalmological and tissue engineering applications.

Coursework:

Module Delivery

This is a lecture, laboratory and tutorial based full time course, with case study work, plus private study and discussion.

Indicative Student Workload	Full Time	Part Time
Contact Hours	30	N/A
Non-Contact Hours	120	N/A
Placement/Work-Based Learning Experience [Notional] Hours	N/A	N/A
TOTAL	150	N/A
Actual Placement hours for professional, statutory or regulatory body		

ASSESSMENT PLAN

If a major/minor model is used and box is ticked, % weightings below are indicative only.

Component 1					
Туре:	Coursework	Weighting:	50%	Outcomes Assessed:	2, 4
Description:	Coursework.				
Component 2					
Туре:	Coursework	Weighting:	50%	Outcomes Assessed:	1, 3
Description:	cription: Coursework assessing ability to design, process and test biomaterials, devices, and equipment for biomedical applications.				

MODULE PERFORMANCE DESCRIPTOR

Explanatory Text

The module has 2 components and an overall grade D is required to pass the module. The component weighting is as follows: C1 is worth 50% and C2 is worth 50%.

		Α	в	С	D	Е	F	NS
	Α	А	А	В	В	С	Е	
	В	Α	В	В	С	С	Е	
	С	В	В	С	С	D	Е	
Coursework:	D	В	С	С	D	D	Е	
	Е	С	С	D	D	Е	Е	
	F	Е	Е	Е	Е	Е	F	
	NS	Non-submission of work by published deadline or non-attendance for examination						eadline or

Module Requirements	
Prerequisites for Module	None.
Corequisites for module	None.
Precluded Modules	None.
