

MODULE DESCRIPTOR

Module Title

Carbon Capture, Utilisation and Storage

Reference	ENM507	Version	2
Created	May 2024	SCQF Level	SCQF 11
Approved	September 2023	SCQF Points	15
Amended	May 2024	ECTS Points	7.5

Aims of Module

The Carbon Capture Utilisation and Storage (CCUS) Short Course provides participants with a comprehensive understanding of the principles, technologies, and applications of CCUS in mitigating greenhouse gas (GHG) emissions and addressing climate change. Participants will develop knowledge of concepts and principles applicable to carbon capture, transport, sequestration and, utilisation in industrial processes and awareness of the roles of carbon capture utilisation and storage (CCUS) in energy transition and mitigation of GHG emission. This course aims to equip professionals, researchers, and policymakers with the knowledge and skills necessary to effectively engage in CCUS projects and initiatives.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Analyse the principles and technologies of Carbon Capture Utilisation and Storage (CCUS).
- 2 Critically appraise the opportunities and challenges associated with Carbon Capture Utilisation and Storage (CCUS) implementation taking into consideration economic, environmental, and regulatory factors.
- 3 Evaluate the role of policy frameworks and incentives in promoting Carbon Capture Utilisation and Storage (CCUS) deployment.
- 4 Synthesise the main scientific and engineering principles and concepts of fluid flow, geomechanics, and geochemistry for Carbon Capture Utilisation and Storage (CCUS) project development.

Indicative Module Content

Major carbon-intensive industries, CO₂ capture methods and technologies, CO₂ transport via pipelines, CO₂ storage in depleted oil reservoirs and saline aquifers, CO₂ utilisation for industrial processes and manufacturing, CO₂ enhanced oil recovery, CO₂ fluid properties and phase envelope, Estimation of CO₂ and other GHG removal, monitoring and verification of stored CO₂, formation rock- CO₂ interaction and associated geochemical reactions, geomechanics of CO₂ injection and storage, economics of CCUS project, environmental aspects of CCUS; Policy and Regulatory Frameworks for CCUS Implementation and GHG accounting; Public Communication; Health and Safety; Case Studies: CCUS Projects and Lessons Learned; Integration of CCUS in the Energy Transition.

Module Delivery

Blended Delivery - Lectures and Guided Self Study.

Indicative Student Workload

Full Time Part Time

Contact Hours

*Actual Placement hours for professional, statutory or regulatory body***ASSESSMENT PLAN***If a major/minor model is used and box is ticked, % weightings below are indicative only.***Component 1**

Type:

Coursework

Weighting:

100%

Outcomes Assessed:

1, 2, 3, 4

Description:

Individual written report.

MODULE PERFORMANCE DESCRIPTOR**Explanatory Text**

Component 1 comprises 100% of the module grade. To pass the module, a D grade is required.

Module Grade

Minimum Requirements to achieve Module Grade:

A

A

B

B

C

C

D

D

E

E

F

F

NS

Non-submission of work by published deadline or non-attendance for examination

Module Requirements

Prerequisites for Module

None but a background in engineering will be beneficial.

Corequisites for module

None.

Precluded Modules

None.
