

MODULE DESCRIPTOR

Module Title

Economics Of Energy Transitions

Reference	BSM216	Version	5
Created	January 2024	SCQF Level	SCQF 11
Approved	May 2020	SCQF Points	15
Amended	March 2024	ECTS Points	7.5

Aims of Module

To provide students with an advanced understanding of world energy markets and the evolution of, and challenges facing, the carbon economy. To provide students with a working practical knowledge of the role that economics of energy transition plays in the decision making within the energy industry. To enable students examine the direction and pace of the clean energy transition and sustainability.

Learning Outcomes for Module

On completion of this module, students are expected to be able to:

- 1 Critically assess the economic concepts and principles of market demand and supply underlining operations of the global energy markets.
- 2 Critically reflect on and apply the principles of transition energy economics to decision making related to new energy options.
- 3 Evaluate the impact of greenhouse gas emissions and climate change as impetus for the transition away from burning fossil fuels.
- 4 Analyse how different energy sources compare in terms of cost and value.
- 5 Critically apply economic modelling approaches to risk and uncertainty in renewable energy context with focus on broader impact of transition risk.

Indicative Module Content

The module is delivered in two parts. The first part explores the evolution of the carbon economy and energy markets. This section will also consider labour markets in the energy sector and basic macro and micro economic concepts, including the impact of digitalisation, decentralisation and automation on demand side driven net-zero transition. The second part of the module will consider cost analysis of renewable energy investments, cost comparison of alternative energy sources and development of alternative business models considering the energy storage.

Module Delivery

The module is delivered in blended mode by lectures, workshops, interactive group work, tutorials and directed self study. The module is delivered in online mode by self directed study learning from web based learning materials, facilitated by online tutorials and group work.
